

Equipment Maintenance Management Solutions

Remi's program was chosen as it is a proven alternative to Original Equipment Manufacturer service agreements. Our plan is to manage your existing equipment maintenance agreements by utilizing one comprehensive program. This will eliminate having to manage multiple service agreements from various manufacturers. You will continue to have the freedom to use your current service provider or any desired provider for each service event.

Remi analyzes your current equipment maintenance portfolio, maintenance agreements, historical maintenance expenditures, and operational practices to develop a customized program to meet your unique needs. The goal of each program is to deliver the specialized management tools, expertise, and support necessary for you to achieve enhanced equipment performance coupled with significant cost savings.

Cost Reduction

Reduces current maintenance contract cost by 27%.

Reduces Administrative Time

Reduces the time that you spend administrating multiple service contracts from various equipment manufacturers and service providers.

Guaranteed Budget

Plans maintenance budgets with fixed annual costs rather than the fluctuating costs and expensive "surprises" of other maintenance programs.

Life Cycle Management

Manages the maintenance of your equipment portfolio guaranteeing decreased cost, increased equipment uptime, and extended useful life expectancy.

Total Vendor Control

Delivers an unbiased vendor solution that allows you to use your preferred service vendor or we can supply the best qualified alternative vendor available.

Visibility

Enables you to more effectively analyze the quality of the repair and service and the performance of the equipment and service provider through real-time, online reports.
